Kimera Samples
**WORTH OVER
£40!**

TrollByte Kimera

The third generation sensor holder from TrollDental

- We joined two different high grade polymers in a single holder.
- The result is a one-piece holder with a stiff arm and a softer, adjustable claw.
- The stiff arm ensures accuracy of sensor placement in the mouth.
- The softer claw allows you to finely adjust the tension.
- The TrollByte Kimera kit includes three different holders, one bite block for anterior periapicals and one aiming ring.
- TrollByte Kimera is custom made for most sensors on the market including phosphor image plates.
- All pieces are fully autoclavable.

The aiming ring is colour coded to match the holders and five different image positions.
